

[RC_PD Internal] Unlimited Leverage / Dynamic Leverage Business Model

APAC Unlimited Leverage Project Requirements Document

Unlimited Leverage/Dynamic Leverage Online SOP

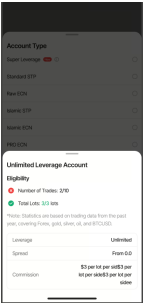

Unlimited leverage BIT/MQ configuration

Account opening threshold:

Complete 10 orders within 1 year, and the total number of lots reaches 3

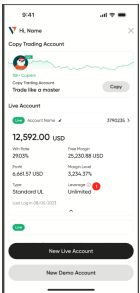

Products Included : Forex, Gold, Silver, Oil, BTCUSD

Objective: Avoid robot account opening transactions

Leverage

Clients can only use 1: 2 billion leverage, and cannot make selections on the client portal

group setting

	MT4	MT5
Stop Out	0%	
Margin Call	30%	
Stop out Mode	*Close "skip fully hedge accounts when checking stop out" function	Open "Stop Out Fully Hedge Accounts" function
Commission	Normal	**Change commission Entry to "in" Double the commission
Rebate	Forex, Gold, Silver, Oil 35% Total Spread	
Credit	None	

- * Ensure that the locked position will be reported immediately
- ** Because Stop Out Level 0%, if the handling fee is charged bilaterally, the warehouse will be worn when the warehouse is liquidated, and there is no remaining funds to pay the closing ticket handling fee, so the MT5 handling fee should be changed to the billing fee

Plugin configuration

Unlimited leverage

```

```

plugin logic

YAML File

- It will be applied from top to bottom according to the order of Yaml Files.
- There will be no minimum leverage comparison between rules
- Each rule will be compared with product leverage and customer leverage, and the minimum value will be applied

rule application

Special time slot

- It will only affect the newly opened position, and the position will return to the original leverage after the period.
- Any increased exposure during newstime will be subject to newstime rules

A – Net exposure before a certain trade action (+ Buy / – Sell)

$$A = |b| - |s|$$

B – Net exposure after a certain trade action within ST (+ Buy / – Sell)

$$B = |b'| - |s'|$$

M(A), M(B) – margin for all the positions within a certain symbol

MR_sp – margin per lot during SP

1. if (**A · B > 0**) AND |B| < |A| then $M(B) = M(A) * |B/A|$
 2. if (**A · B > 0**) AND |B| >= |A| then $M(B) = M(A) + MR_sp * (|B| - |A|)$
 3. else (**i.e. if A · B <= 0**) then $M(B) = MR_sp * |B|$
- The plugin achieves specific leverage results by changing the Margin rate

Example

CFD Leverage products when unlimited leverage 1:20bil

Margin: (Lots * ContractSize * MarketPrice) / Leverage (20Bil) * Product Margin percentage * margin rate

CFD Leverage products during special time when fixed leverage 1:200

Margin: (Lots * ContractSize * MarketPrice) / Leverage (20Bil) * Product Margin percentage * margin rate(20Bil/200)

- **15 minutes before the announcement and 5 minutes after the announcement**

News slots include: FOMC interest rate decisions, CPI, PMI, NMI, PPI, GDP, PCE, Retail Sales, NFP (Non-Farm Payrolls), ADP (Private Payrolls), and Crude Oil Inventories.

- **Monday to Friday 1 hour before closing and 30 minutes after opening**

- Affected Products: Forex, Gold, Oil, Indices
Leverage Adjustment: Adjusted to Fixed **1:200**

- Only new positions opened during the period are affected. After the period, the leverage will return to normal.

A. USD News: Affects Gold, Forex, Indices (Does Not Affect Oil)

Includes: FOMC interest rate decisions, CPI, PMI, NMI, PPI, GDP, PCE, Retail Sales, NFP (Non-Farm Payrolls), ADP (Private Payrolls)

B. Oil News: Affects only oil products

Includes: Crude Oil Inventories

C. News from the rest of the country: affecting all foreign exchange (not affecting, gold, oil, indices)

Includes: CPI, PMI, GDP from non-US countries

* The Dealing team crawls [investing.com](https://www.investing.com) three-star news every week and asks admin to arrange plugin configuration
<https://www.investing.com/economic-calendar>

Fixed Leverage

- Some customer leveraged products cannot be supported to unlimited times due to high risk, so they will be written as fixed leverage through rules
- Because the fixed leverage rule level will be below the news period, and the leverage in the news period will be the smallest, even if there is no comparison between the rules, the lower leverage will still be preferentially applied during the news period

Example

CFD Leverage products with fixed leverage 1:200

Margin: (Lots * ContractSize * MarketPrice) / Leverage (20Bil) * Product Margin percentage * margin rate(20Bil/200)

AUDCNH 500

AUDSGD 200

CHFSGD 200

EURSGD 200

GBPSGD 200

NZDSGD 200

SGDJPY 200

USDCNH 500

USDNOK 200

USDSEK 200

USDSGD 200

Net worth detection

- Plugins for real-time detection
- If the client's leverage is changed by net worth detection during news hours

Formula : Margin = (Net Exposure_Non ST position * Tier Margin_Non ST Period + Net Exposure_ST Position * Tier margin_ST Period)

Net worth real-time detection	
Equity	Leverage
0 <= Equity <5000	1:unlimited
5000 <= Equity < 30,000	1:2000
30,000 <= Equity <100,000	1:1000
Equity >= 100,000	1:500

Newstime Test Example

[📄 Leverage Adjustment Logic](#)

Reduce exposure during news hours and increase leverage

- If the lock is **reduced** during the news period, the margin **ratio is reduced**
- If you **adjust client leverage** during news hours, only **old positions will be affected**

- If close the ticket during the news period **reduces** exposure, margin **ratio decreases**
- If you **adjust client leverage** during news hours, only **old positions will be affected**

During the news period, exposure increased and leverage increased

- If opening a position during the news period **increases** exposure, the margin will increase according to **the leverage during the news period**
- If you **adjust client leverage** during news hours, only **old positions will be affected**

- If the lock is unlocked during the news period to **increase** exposure, the margin will increase according to **the leverage during the news period**
- If you **adjust client leverage** during news hours, only **old positions will be affected**

Increase and reduce exposure during the news period, completely lock, and increase customer leverage

- If the lock is unlocked during the news period to **increase** exposure, the margin will increase according to **the leverage during the news period**
- If the lock is **reduced** during the news period, the margin **ratio is reduced**
- If the lock **exposure is 0 during the news period**, the margin **becomes 0**
- If the news period opening **increases** exposure, the margin is based on the **news period leverage increase**
- If you **adjust client leverage** during news hours, only **old positions will be affected**

Increase and reduce exposure during the news period, partially lock, and increase customer leverage

Lock during the news period, change the direction of exposure

- If the lock is unlocked during the news period to **increase** exposure, the margin will increase according to **the leverage during the news period**
- If the news period exposure **direction changes**, the **old position and does not exist**
- If you **adjust client leverage** during news hours, only **old positions will be affected**

Means of risk control

Negative Net Worth Protection

- If the current Equity < 0 , no new orders are allowed

Objective: To prevent customers from stuffing single brush commissions through OZ's delayed liquidation method

- If the billing results in Equity ≤ 0 , the billing is not allowed. Equity - Fee (including Spread & Commission) ≤ 0

Objective: To prevent customers from opening full commissions and arbitraging through unlimited leverage. Or directly liquidating the position due to too large a lot affects the customer experience

negative margin protection

- If the current Free Margin < 0 , it is not allowed to increase exposure (including billing or unlocking)
- If the transaction results in Free Margin < 0 , it is not allowed to increase exposure (including billing or unlocking).

Objective: To prevent customers from opening positions to infinity

If Free Margin ≤ 0 , it is allowed to increase the absolute value of Free Margin through transactions

Remarks: At present, the function plug-in logic of MT5 batch closing the ticket is not covered and is not protected. Risk consent has been obtained, and the version will be iterated after going online.

test account

* Before the test, you must confirm with the admin whether the group is in the unlimited leverage group.
