

[RC_PD Project] APAC Unlimited Leverage Project Requirements Document

A. Cross-sectoral POC (PIC)

department	member	Core Responsibilities
Product	Cathy (Lord)	The overall project owner is responsible for clarifying the needs of brand sales bosses, communicating and coordinating across departments, promoting project progress and landing, and being responsible for the overall project
	Caleb (Deputy)	
BIT	Vincent Zhang (main)	The person in charge of all modules of the overall project BIT, controls the business content involved in the project (including account modules, IB modules, system modules, etc.), and is responsible for the overall project
	Eason Zhang (Vice)	
Operation	Betty (main)	Responsible for the main person in charge of the OP business in the APAC unlimited leverage project to ensure that the impact on customer IB sales and other areas is minimized when the whole is launched
	Jin (Vice)	
Risk	Amin	Risk control test Responsible for APAC unlimited leverage project review owner
Admin	Andy Chang	System test responsible for APAC unlimited leverage project docking communicator
	Elio Chang	
Plugin	Vladimir	The person in charge of the unlimited leverage system plug-in party ensures that the underlying system operation is OK (he is a system developer and will not participate in front-end meetings)

C. MT4 Premium Pushonline:

- Send an upgrade notification to mt4 premium account customers in the week of 10/13. Notification content:

From 11/17, the APAC Premium account will become an unlimited leverage account APAC Premium Unlimited, and the original customer environment will also be upgraded simultaneously

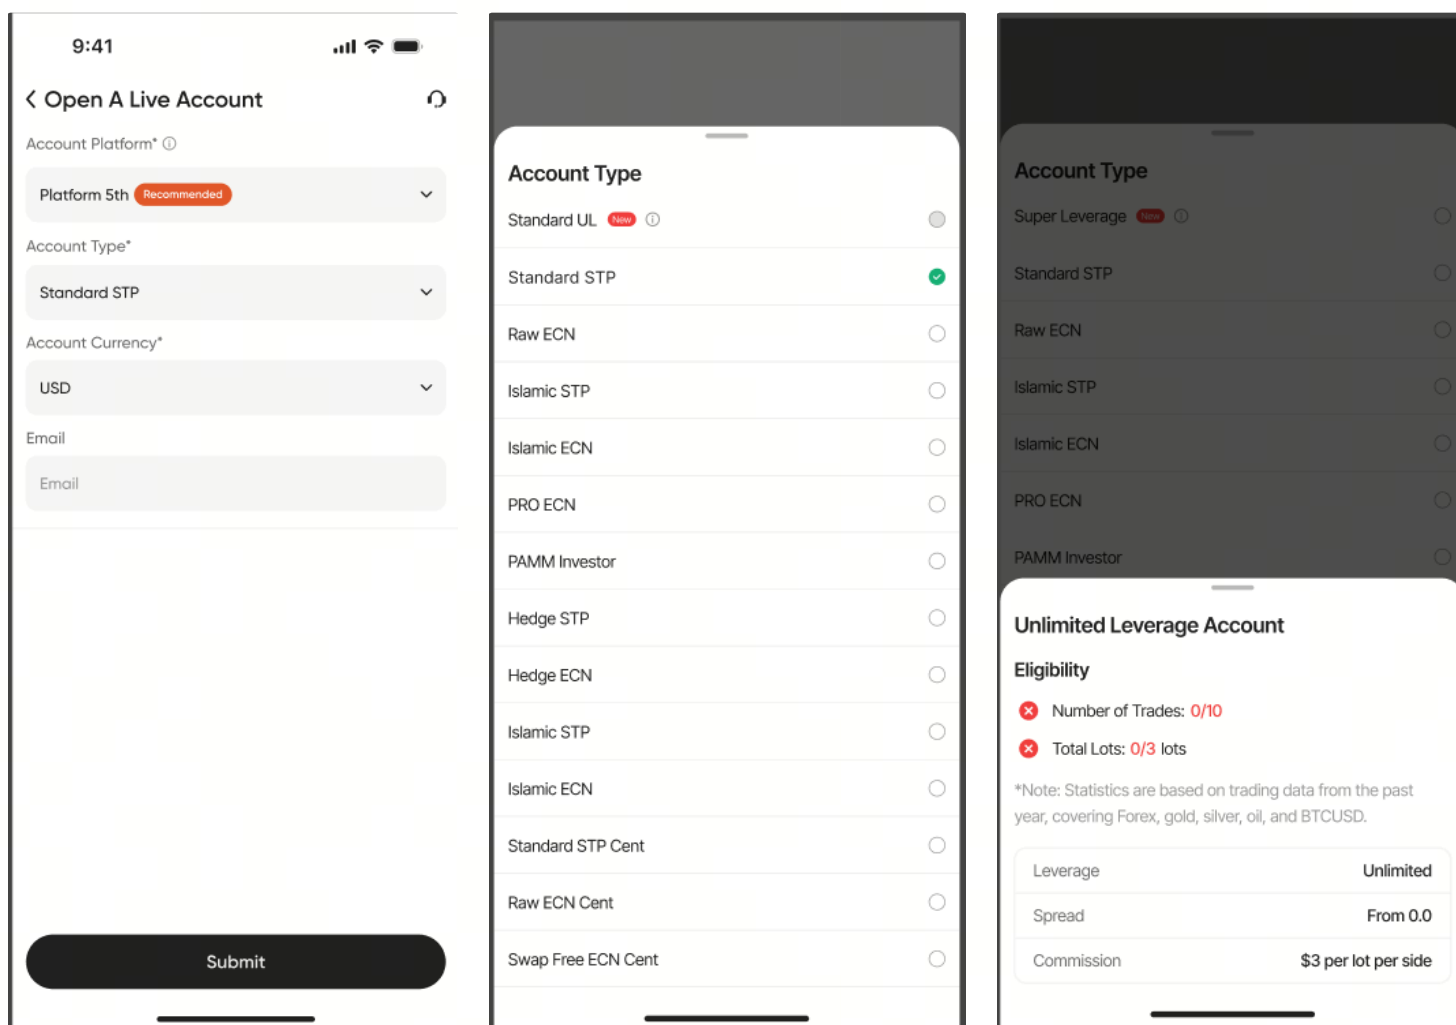

From 11/17, the first phase of APAC Premium Unlimited will only be open to new customers in India and Vietnam. Other APAC regions will not be displayed in the Client portal for the time being, and new customers cannot apply. The follow-up will be opened one by one according to the situation (original customers will not be affected)

From 11/10, mt4 premium customers will be set to close only and must close their existing positions on 11/14 EOD. If the closure is not completed by then, the backstage will help customers close their positions at 11/14 EOD price

- 11/10 Please  Peter Hung admin set close only for the VUR/VIGR group on the bridge, and the .p products on MT4 AU6 are also set close only synchronously.  Eason Zhang  Victor Zhang Please make sure whether the corresponding settings are also made on the APP to avoid the manger API still allowing customers to place orders
- 11/14  Peter Hung , please close the remaining position with EOD price.  Caleb Chen will provide the position list again
- 11/15  Alison Yang  Peter Hung Please help to adjust the leverage of mt4 premium customers to 2 billion times (to use the admin automation tool, there is currently a lock limit because I am afraid that someone will set the wrong one. In the week of 11/10, please automatically adjust the upper limit and test it in the middle of the week to confirm that the tool is OK). In addition, you need to apply the plug-in rules for the mt4 premium group and set it to an unlimited leverage environment
- 11/17 Customers need to log in again to display the correct deposit.

[APP new account opening]

E. Minutes of meetings

[2025.08.07 issues for discussion]

1. Will MT5 Premium be launched together after the development of unlimited leverage? **You need to wait for the latest schedule of unlimited leverage to make a decision**
2. Unlimited leverage on the Premium account type, do you need a new account name to go back online, or use the original Premium account? **Use the original Premium Account, but add a hint of Unlimited leverage**
3. Is there a minimum deposit threshold to use the Premium limit? **You can use it**
4. In order to avoid customers from arbitrage, any handling fees must be charged as long as the account with unlimited leverage is applied.
5. On the Friday EOD before the launch, Premium customers must be asked to close the warehouse, otherwise the background will do forced closing.

[2025.08.25 issues for discussion]

1. Unlimited leverage online arrangement, BIT to 11/4 (overall module), admin MT5 Premium 11/8, whether the backend can have a consensus 11/8 brand side online (**tentatively scheduled for 11/15, follow-up BIT assistance confirmation**)
2. The MT5 Premium 11/8 group has only been established. Can admin launch some products and plug in the official/test group, as well as BIT to do related tests?

(Admin10/25 can configure the Premium group and products. There is a quotation but the order has not been completed. BIT to be confirmed, PluginOK)

3. Unlimited leverage minimum deposit can use Premium rules, but Vietnam is now 0 dollars, the brand wants to benchmark Exness 200 dollars, need to trouble BIT in 11/10 online also do configuration (**with Bethany docking, can be subordinate in advance**)

4. Unlimited leverage

- 11/7 EOD Admin helps to balance the remaining position of mt4 premium, the group is temporarily disabled
- 11/8-11/9 Admin open Premium MT5 group officially effective, and complete the difference, BIT configuration
- 11/8-11/9 Admin Unlimited Leverage Group Environment for Existing Premium MT4 with Difference Application
- 11/8-11/9 BIT excludes VUR/VIGR group BIT stepped leverage rules, only self-developed plugins, and updates the account name in APAC client portal/website and other related places (Premium unlimited leverage) (**BIT internal confirmation**)

F. Training information

Q1: Giving customers unlimited leverage will make it easier for customers to liquidate their positions?

A: Before calculating the liquidation, let's first understand how the relevant formulas are calculated

- $\text{Equity} = \text{Balance} + \text{Floating PNL}$
- $\text{Margin Level} = \text{Equity} / \text{Margin} * 100\%$
- $\text{Stop Out\%} = \text{When the Margin Level hits Stop Out, the customer will liquidate the position}$
- $\text{Margin} = \text{Position} / \text{Leverage}$ (simple formula)

Example description:

1. Assume Client A, Balance 1000, leverage 1:1000, gold price \$4,000, Stop Out 0%

Maximum position: 2.5 lots, position size 1,000,000 Margins = 1000 dollars, Margin Level = 100%

Liquidation scenario: When the price falls to \$3,996, the customer loses - \$1,000 [(3996-4000) * 100 * 2.5 = -1000], Equity = 1000-1000 = 0

Margin Level becomes 0/1000 = 0% to stop out

Assume Client B, Balance 1000, leverage unlimited (1:2000000000), gold price \$4,000, Stop Out 0%

Same position: 2.5 lots, position size 1,000,000 Margin = 0.0005 dollars, Margin Level = 200,000,000%

Liquidation scenario: When the price falls to \$3,996, the customer loses - \$1,000 [(3996-4000) * 100 * 2.5 = -1000], Equity = 1000-1000 = 0

Margin Level becomes 0/1000 = 0% to stop out

Conclusion:

1. **With Stop Out set to 0%** , the liquidation condition is equal to **Equity $\leq$ 0** .
2. No matter whether the leverage is limited or unlimited, as long as the position is the same and the price is reversed by \$4, the position will be liquidated directly.
3. Therefore, the **leverage size will not affect the position of the "liquidation point"** , only the "required initial margin" and "Margin Level value"
4. **In the case of the same position size and the Stop Out setting is 0%, unlimited leverage does not make it easier for the customer to liquidate the position. But the significance of high leverage is that the customer can open a larger position under the same balance, thereby magnifying the potential loss and profit of the account.**

Q2: If the client's net worth exceeds 5,000 due to profit, the leverage is reduced to 1:2000, will it cause the client to liquidate the position?

A: No. Same as Q1, in the case of **Stop Out set to 0%** , the liquidation will only be triggered when the **Equity $\leq$ 0** . After the leverage is lowered, the **Margin Level** will indeed decrease, but since the value is still greater than 0, it will not directly cause the liquidation.

Q3: In the case of unlimited leverage, will the Margin level also be unlimited on MT4/MT5?

A: No, although it is advertised as unlimited leverage, there is still an actual value of 1:2,000,000.000 leverage behind it.

MT4: Place an order for 1 lot of XAUUSD, margin = $1 * 3548.27 * 100 / 2000000000 = 0.0001774135$ (but because the MQ system can only display 2 decimal places, margin shows 0.00)

Margin percentage = $\text{Equity} / \text{Margin} = 4791.43 / 0.0001774135 = 2,700,713,305.36\%$

Balance: 4841.00 USD Equity: 4825.00 Free Margin: 4825.00													-16.00												

Q4: Under the condition of unlimited leverage, can I open my position to unlimited size?

A: Since the required margin is extremely low, in theory, the position can be opened to a large extent without additional restrictions. However, it must be noted that the product itself has transaction costs such as **spreads and handling fees**. When placing an order for a large position, these costs may immediately exceed the account Equity, resulting in a negative Equity and liquidation of the position at the moment of placing the order.

Therefore, in the "unlimited leverage" mode, we have added a logic check that the **transaction cost must be less than the net value when placing an order** to ensure the security of the system and customer transactions.

Example description:

- Account Balance: \$1,000
- Leverage: 1:2,000,000,000
- Gold Price: \$3,550
- Theoretical maximum position: approximately 5,633,802 lots
 - Margin calculation: $3550 \times 100 \times 5,633,802 \div 2,000,000,000$ Technologies 999.99 dollars

Assuming the transaction cost per lot (spread) is 20 dollars,

- Such a position will cost 20 dollars $\times$ 5,633,802 Technologies \$112M, far more than Equity, and will be liquidated immediately.
- This not only results in an extremely poor customer experience, but also may pose the risk of "swiping commissions and arbitraging".

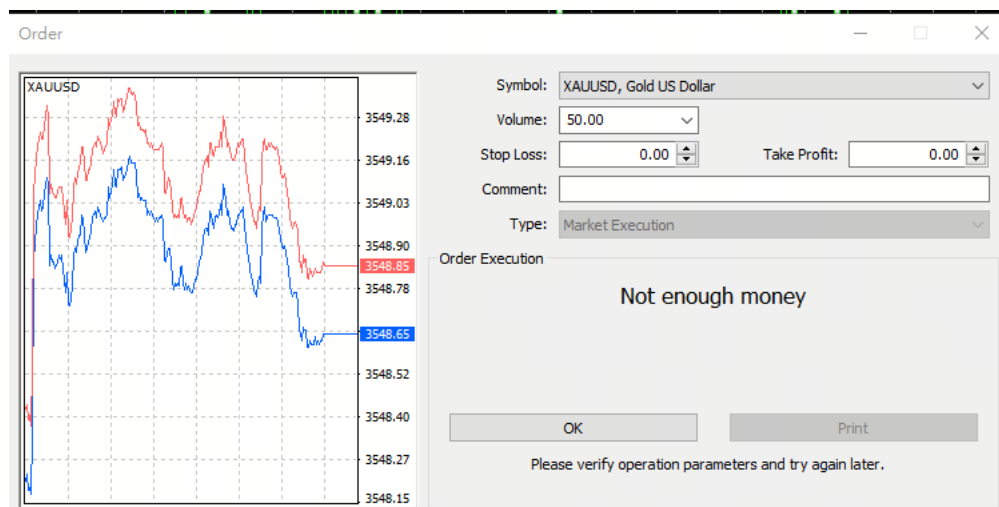

Therefore, we have taken the following measures:

- Maximum Lot Limit
- The check logic for transaction costs to be less than the net worth

For example:

- Current net worth \$1,000
- Open 50 lots, spread per lot 20 dollars $\rightarrow$ cost \$1,000
- Since the opening cost is **not less than the net value**, the system will pop up **"Not enough money"** warning to prevent the order.

The opening cost spread is 20 dollars $\times$ 50 = 1000 dollars, and it is not less than the net value, so there is a pop-up warning of "Not enough money".

Q5. How often will the leverage change caused by the fluctuation of net worth be refreshed?

A: Net worth and leverage changes are detected in real time, but the actual execution speed will still vary depending on the current state of the server

Q6. Why can't the bonus be opened under unlimited leverage?

A: The main reason why the bonus cannot be opened is because we offer 0% liquidation ratio to clients, with high leverage trading

1. Stop Out 0% Mechanism

- Force position squaring only when account equity drops to 0%.
- This means that customers can use up all their principal, and the remaining risk of loss will be entirely borne by the company.
- If the bonus is opened at the same time, the customer can continue to support the order "with the company's money", resulting in additional risk exposure.

2. Stop Out 20% (or Higher) Difference

- When Stop Out is set at 20%, it means that when the account equity falls to 20% of the total margin, the system will force position squaring.
- Under this design, customers must first bear a portion of the losses (including their own principal) before they can use the bonus.
- Therefore, the bonus is only used as a "support" or "buffer", rather than the company unilaterally shouldering all losses.

Q7. What products can be used with unlimited leverage?

A: Unlimited leverage is applicable to **"Customer Leverage Products"**, which mainly includes:

- mainstream foreign exchange
- gold

Products with **margin calculation mode** of **"Forex"** or **"Cfd leverage"** are classified as client leverage and therefore can be applied with unlimited leverage.

⚠ exception note : Although some foreign exchange currency pairs belong to customer leverage products, they **do not apply unlimited leverage** :

AUDCNH, AUDSGD, CHFSGD, EURSGD, GBPSGD, NZDSGD, SGDJPY, USDCNH, USDNOK, USDSEK, USDSGD

Q8. Will leverage changes during the news period cause customers to liquidate their positions?

A: No.

Leverage limits for special periods **will only affect newly opened positions within that period**, and at the end of the special period, leverage will revert to default (e.g. unlimited leverage).

Example description:

- Suppose the price of gold is **\$3,000** and the leverage is fixed at **1:200** during special periods.
- If **1 lot of gold** is opened within 15 minutes before the CPI announcement, the required margin is calculated as follows:
 $3000 \times 1 \times 100/200 = 1500$ (USD)
- Five minutes after the press release, the leverage is restored to **infinite times**, at which point it is calculated:
 $3000 \times 1 \times 100/20000000000 = 0.00015$ (USD)

Key points:

- Even if the leverage decreases during the news period, because **Stop Out still maintains 0%**, as long as the client's Equity does not fall to ≤ 0 due to price fluctuations, it will not trigger a liquidation.
- In other words, the **leverage limit for special periods only limits the size of positions that clients can open** (due to increased margin demand), but **does not increase the risk of liquidation**.

Conclusion:

The leverage limit during the news period is to "limit the size of the position", rather than "increase the probability of liquidation".

Q9. Does unlimited leverage support copy trading?

A: At this stage, unlimited leverage does not support copy trading, including our own APP Socail Trading, as well as third-party systems PAMM, MAM, etc., do not provide unlimited leverage

Q10. Why does the message "Not enough money" appear when I have a small margin under unlimited leverage?

A: To protect customers and the company, there will be a "Not enough money" alert in the following scenarios

- **Equity-Margin<0**

The equity in the account must be sufficient to cover the required margin

- **Equity<0**

When the customer's net worth is less than 0, the position exposure cannot be increased by any means. For example, opening a position, or lifting a unilateral lock

- **Free Margin <0**

When the available margin is less than 0, the position exposure cannot be increased by any means. For example, opening a position, or lifting a unilateral lock

- **Equity - Fee < 0**

The customer's order cost should be less than the net account value. The order cost includes spreads + handling fees.

Q11. What are the advantages of wireless leverage? How can we promote it?

- **Highlight market uniqueness**

Most CFDs on the market, even if they advertise "high leverage", are usually capped at only **1:500, 1:1000**, and a few extremes provide **1:2000 or 1:3000**. There are very few brokers that can really provide "**unlimited leverage**". We can provide unlimited leverage, which means that the brand is more mature in liquidity management, risk control model, trading system design, and the business model is at the forefront of the market.

- Maximize capital efficiency

Mainly focuses on the concept of "controlling the maximum position with the least margin".

- High flexibility

Clients can open multiple orders at the same time without being forced to withdraw due to insufficient margin.

- **Lower the funding threshold**

Small capital customers can also participate in mainstream foreign exchange, gold and other block trading, lowering the entry threshold.

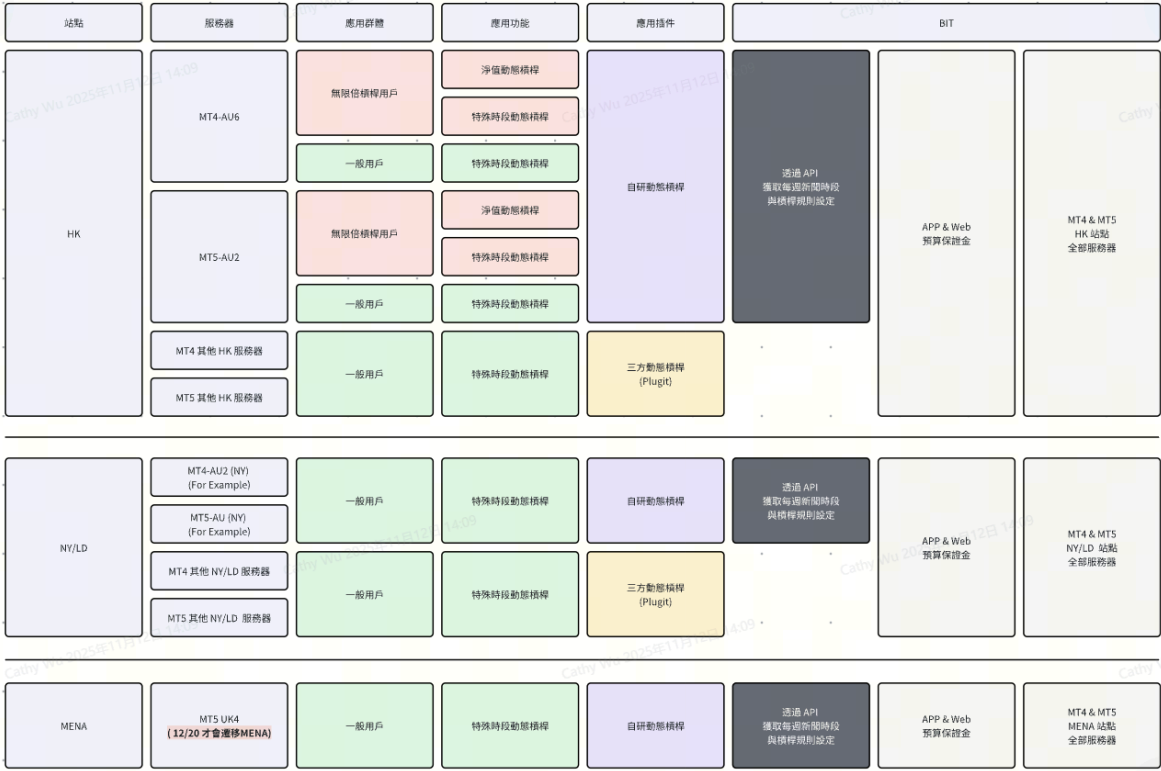

- **Does not affect risk management**

Emphasizing "unlimited leverage ≠ unlimited risk", Stop Out, risk warning, negative balance protection and other mechanisms still exist.

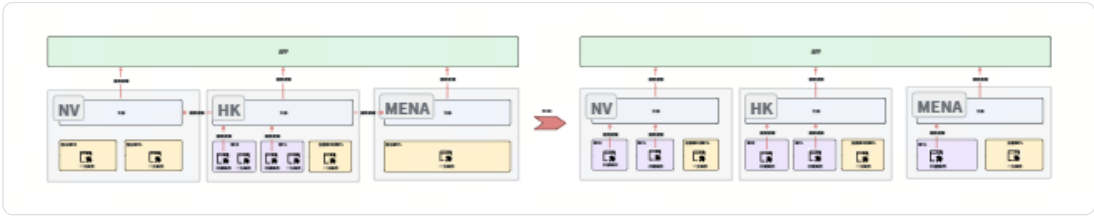

The actual risk still depends on the size of the position and trading habits.

(Detailed schedule description)

(Backend system scheduling)

(The latest online scheduling and notification process 2026.01.06 updated)

H. Extension of the project at the end of 2025

1. Meeting Purpose

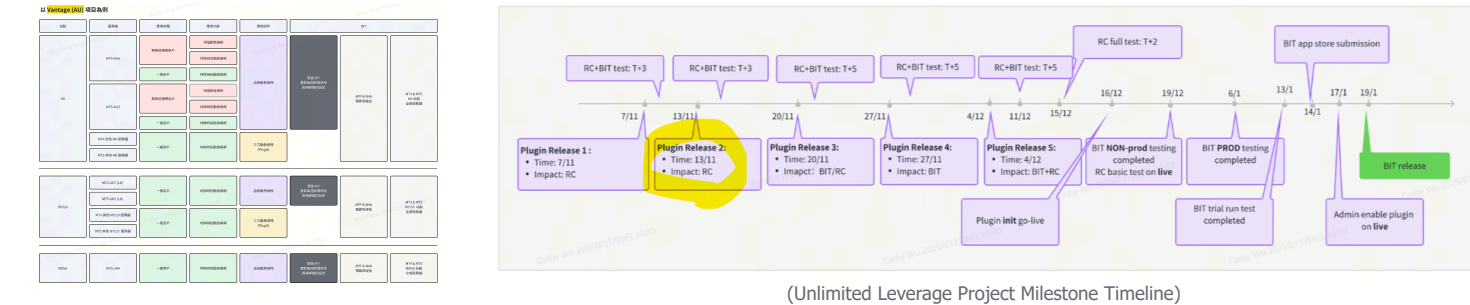

- Aligning the original goals and scope of requirements for this unlimited leverage project
- Explain the reasons for this delay and the adjustment of the technical plan
- Confirm the new launch schedule and test plan
- Coordinate branding and cross-regional scheduling to ensure delivery is in line with market rhythm

2. Original Requirements Scope Review

project requirement	launch time	Scope of application	
1. Open Unlimited Leverage Application	Extended to 2026.0 . 3.09 .	MT4 AU6 Premium Account/MT5 AU2 Premium Account (Vietnam, India/CIS/Russia/Mongolia priority opening new account application)	Enhance product competitiveness Meeting the competitive promotion ne leveraged market
2. Dynamic Leverage Application	Extended to 2026.0 3.0 9 . 9	- MT4 AU6 Premium Account/MT5 AU2 Premium Account - All account types	- Ensure unlimited leverage environmen - Prevent problem customer generation
3. Stop out 0% group configuration	checking	For use by four sales organizations in Vietnam, Russia, Uzbekistan, and Mongolia	Stop Out 0% as a trading alternative after lowering the threshold for strong leveling
4. Equity layer with 1000/2000x leverage	checking	All account types	Increase the utilization rate of customer fi

- Enhance product competitiveness through "unlimited leverage" to accelerate APAC marketing activities and active growth
- In order to ensure that the unlimited leverage environment is controllable, the risk control terminal requires that the "news period + net value stepped leverage" must be launched at the same time * (The premise of the completion of the unlimited leverage project requires the support of two functions of unlimited leverage + dynamic leverage)
- Due to the fact that Gap/GAP Trading has become the norm during the news period and brings actual losses, risk control decided to extend the leverage rules during the news period to general customers to avoid risk spillover; APAC's subsequent launch of Stop Out 0% account group requires dynamic leverage to be implemented first

3. Current progress & reasons for delay

Current progress:

The development of version 2 on the plug-in side is expected to be released this Thursday

- 1. Plugin side: Since 11/7, 5 revised versions have been released in batches to deal with existing test issues. The final version is expected to be completed and launched on 12/4
- 2. BIT side: Since 12/4, it has been launched based on Trade API 2.0, and the APP needs to be forcibly updated; it will be tested for 4 weeks (testing environment + Live) + 1 week internal test, and will be released and launched on 1/19
- 3. Admin/Product/Risk Testing: Functional testing based on each plugin version

Extension instructions:

上述條件 (Admin最終判斷應用方式)	自研插件	自研插件	第三方插件 (Plugit)	第三方插件 (Plugit)

9/11 Confirmation Scheme Application:

- 1. Unlimited accounts achieve unlimited and dynamic leverage functions through **self-developed plug-ins** ; general accounts achieve dynamic leverage through self-developed plug-ins
- 2. The remaining servers use **third-party plug-ins** to apply dynamic levers

	MT4 AU6	MT5 AU2	Others MT4	Others MT5
無限槓桿帳戶 (Unlimited Leverage Accounts)	V	V	X	X
-無限制槓桿應用(Application of unlimited leverage)	V	V	X	X
-動態槓桿應用(Application of Dynamic leverage)	V	V	X	X
上述條件 (Admin 調整應用方式)	自研插件	自研插件	第三方插件 (Plugit)	第三方插件 (Plugit)
一般槓桿帳戶 (Normal Accounts)	V	V	V	V
-動態槓桿應用(Application of Dynamic leverage)	V	V	V	V
上述條件 (Admin 調整應用方式)	第三方插件 (Plugit)	第三方插件 (Plugit)	第三方插件 (Plugit)	第三方插件 (Plugit)

10/27 Test found self-developed plug-in development issues:

- The self-developed plugin cannot use dynamic leverage on the general account of MT4AU6 + MT5AU2

10/31 Confirm the change plan after evaluation: (not the best system plan, system management and operation and maintenance are difficult)

- Make up for the shortcomings of self-developed plug-ins through third-party plug-ins

11/03 Test found self-developed plug-in development problems:

- The infinite lever has a flaw in the logic of "unlocking" during the news period
- The self-developed plug-in needs to deliver the latest version on 11/13 (the internal evaluation was completed on 11/05)**

	MT4 AU6	MT5 AU2	Others MT4	Others MT5

上述條件 (Admin最終判斷應用方式)	自研插件	自研插件	第三方插件 (Plugit)	第三方插件 (Plugit)

11/10 Confirm the use of the original solution (the best solution for the system), and reassess the development and testing schedule.

- 12/4 The self-developed plug-in has been developed and the final version has been released
- 12/4~ 1/19 All teams test the final version (BIT/PD/Admin/RA, etc.)
- 1/19 officially launched**

4. New launch schedule & test plan

Test plan:

Date	test project
2025.11.10 - 2025.11.13	Unlimited leverage n verification
2025.11.13 - 2025.11.18	Verification of lock fr news period
2025.11.20 - 2025.11.27	General customer ne verification
2025.11.27 - 2025.12.04	Plugin user settings system interaction v
2025.12.04 - 2025.12.08	plugin load optimiza
2025.12.08 - 2025.12.15	Testing environment
2025.12.08 - 2025.12.19	formal environment verification
2025.12.16 - 2025.12.19	formal environment verification
2025.12.19 - 2026.01.06	Unlimited leverage u
2026.01.06 - 2026.01.13	Unlimited leverage u
2026.01.14	APP Store version m
2026.01.17	The plugin is official
2026.01.19	Unlimited leverage/s leverage online

Grey release plan	Original new account (Premi application opening hours
Vietnam, India/CIS/Russia/Mongolia	2025.11.17
The rest of the region	2025.12.1
The rest of the region	Mid to late December 2025

*** This is the grey release plan after the launch. After the launch is postponed according to 1/19, it will be extended as above (to be confirmed by the brand)**

**** Supplement: Feature will be launched on 1/19 Unlimited Leverage + Dynamic Leverage (0% stop out account group will open four sales organizations**

Bethany Shi together on 1/ 29)

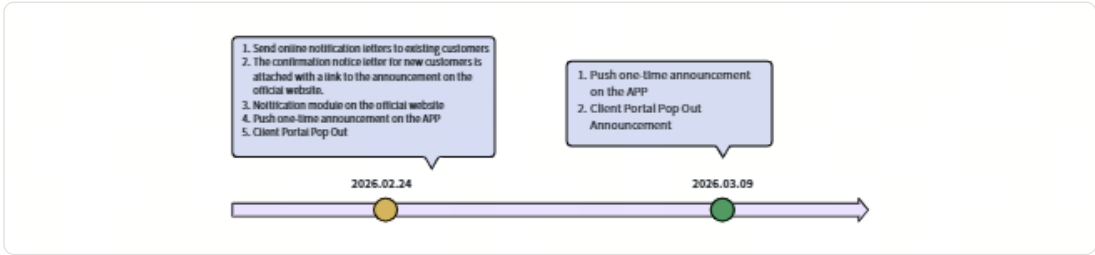

Marketing notice schedule: (to be confirmed by the brand)

Customer Notification Template : [Vantage Customer Notification Process](#)

1. Dynamic leverage notification:

Timeline:

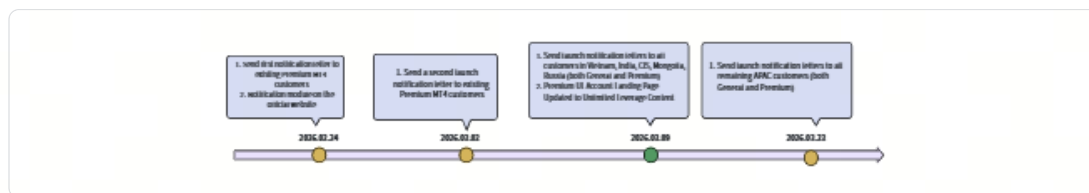

Notification letter of dynamic lever Weekly update : (Dynamic lever will be applied to "all customers", not only premium accounts) ** No need to send dynamic lever notification letter (One-time notification, and can be updated in notification, tend to weekly update, update news time period; social media, etc.)

- 1. For customer notification letters, it is necessary to mark "special time period events and the time of impact, which may vary according to risk management decisions" to avoid potential customers suing cc. [Lyn Chang](#) [Eira Li](#)
- 2. **What file format and letter template does the Marketing team** need to receive background announcements in order to publish them on the website? cc- [Lyn Chang](#) [Eira Li](#)
- 3. **Marketing/Brand** What form would you like to inform customers? (e.g. official website announcement or email notification) cc- [Leonardo Au](#) [New Jira](#) [Lyn Chang](#) [Eira Li](#) **** EDM?**

HMR 期間 10.11.2025 - 14.11.2025						
日期	週	時間 GMT+2	新聞	貨幣	開始時間	結束時間

14/11/2025	週五	15:30	美國生產者物價指數月率	USD	15:15	15:40

1. Unlimited leverage notification:

Topic: Can MT5 Premium be launched on 11/17? Without using unlimited leverage function

Reply: It has been confirmed with the system team that because the APP will be blocked tomorrow (submitted to the application mall), it is too late to adjust the underlying code for regression test, so 11/17 cannot be launched first. The general version of the MT5 Premium account

Supplement: Understanding that the function is only the difference between unlimited leverage and 2000 times leverage, but for the BIT account side and the trading side, it involves the underlying code rewriting, which requires a lot of resources to adjust and develop. Therefore, the preliminary assessment shows that the MT5 Premium account will still be launched on 1/19 after the unlimited leverage is perfected
